

West Valley Nuclear Waste Site watch-dog organizations are calling for:

- Full Enclosure over the demolition** of the main reprocessing building, especially the hottest rooms.
- Real-time offsite monitoring** of air and water for radionuclides and **real-time public reporting**--before, during and after the demolitions.
- Greater NYS Agency** (NYSERDA, Dept of Environmental Conservation and Dept of Health) **assertion of state authority** over the ongoing phases of clean-up, above and below ground.
- A **publicly accessible, searchable on-line library** of all information, reports, studies, analyses, resources, assumptions, expert opinions, judgements and solicitations used and considered in decision making at West Valley.

These are needed for the future excavation of the massive amounts of radioactive waste underground at the site as well as the upcoming demolition of the main reprocessing building (MPPB).

There are precedents for these ASKS in NY and other states. Decisions made now can prevent dispersal in our region and downwind/downstream. Contamination would be permanent/irreversible because the plutonium and other radioactive elements are biologically dangerous now and for thousands to millions of years.

Thank you to all the workers at the site who are protecting us from very large amounts of radioactive waste above and below ground in the buildings, containers, structures, soil and water.

We were not allowed to have a table or space to provide information at this event, so are providing this short summary.

Thank you for your interest in the West Valley nuclear site.
